1.Explain the difference between Relative , Absolute and Mixed Cell Referencing.

Answer:- Relative cell (e.g,A1) cell reference changes relative to the new cell's position when copied. Absolute(e.g,A1) keeps the cell reference constant regardless of where the formula is copied.The dollar signs "lock" the row and column and Mixed cell referencing(e.g,$A1 or A$1) locks either the column or the row, but not both.
